DC Admin Guide

Commands, automations, and responsibilities for Discord Admins

Last updated: June 2026

Overview

DC Admins handle Discord moderation and can issue temporary game bans. You cannot issue permanent game bans or take action against other DC Admins or higher ranks.

Automated Actions

When Someone Joins Discord

- Non-Member role applied immediately.
- Welcome message posted in #general-lounge with a direct link to #rules.
- Structured Member Joined embed posted in #modlogs.

When Someone Leaves or is Banned from Discord

- Goodbye posted in #general-lounge. Member Left embed posted in #modlogs.
- Auto-deboarded: marked inactive, removed from allowlist.
- If banned: flagged as banned in database.

When a Player Joins the Game

- Real Xbox XUID captured via Pterodactyl WebSocket and saved to database.
- XUID checked against banned list — evasion attempt triggers auto-kick and Discord ban.
- Player added to allowlist automatically via Pterodactyl API.
- Join embed posted to #in-game-chat (name, platform, online count).
- If first ever join, onboarding welcome ticket auto-closes.
- If returning Non-Member, Member role restored and allowlist re-added automatically.

When a Player Leaves the Game

- Leave embed posted to #in-game-chat with name, session time, and online count.

When a Player Dies in Game

- Death embed posted to #in-game-chat with name, cause, coordinates, and dimension.

Spam & Scam Detection

- Same message in 3+ channels within 60 seconds: all copies deleted, member muted 30 minutes, each deletion logged in #modlogs, summary posted to #admin.
- 10+ messages in 10 seconds: same result.

- Scam keywords (crypto, free Nitro, etc.): message deleted, member mimed, logged in #modlogs.

Message Logging

- All edited messages logged in #modlogs showing before and after content.
- All deleted messages logged in #modlogs with content and attachments.

Onboarding Flow

- Member clicks I Agree in #rules, submits gamertag → Non-Member swapped to Member, nickname set, allowlist add sent to Pterodactyl, logged to #modlogs and #in-game-names.
- Private welcome ticket opens with server IP (23.111.186.26:50057) and connection instructions.
- Ticket closes automatically on first game join.

Nightly Midnight Report (#admin)

- Non-Member allowlist sweep — removes any Non-Member from allowlist nightly.
- Recently Played — players active in last 7 days.
- 30-59 Days Inactive — newly inactive, first alert, no action.
- 60-89 Days Inactive — roles stripped, Non-Member applied, allowlist removed.
- 90+ Days Inactive — flagged for consideration of removal.
- Skipped — Server Admin and DC Admin listed separately if inactive, no action taken.
- Head Admins and Non-Members never appear in the report.
- Never Logged In — Discord members who have never joined the game.

Your Commands

All slash commands are ephemeral (visible only to you) and can be used in any channel.

Ban Commands

DC Admins can issue temporary game bans only (1 Day, 3 Days, 1 Week). Cannot ban another DC Admin or higher.

Command	Description
<code>/ban</code>	Ban a player. Enter name and reason — a duration dropdown appears (1 Day, 3 Days, 1 Week, Permanent*). Queues game ban via Pterodactyl, removes from allowlist, deboarded, player DMed, ban ticket opened, ModLogs posted, #admin notified. *Permanent requires Server Admin+
<code>/unban</code>	Lift an active ban early. Game unban queued, allowlist restored, player DMed, ban ticket updated and closed in 24hrs. Player must re-onboard.
<code>/banlist</code>	View all currently banned players with duration, expiry, and who issued the ban.
<code>/baninfo</code>	Full ban record for one player — status, reason, who banned, expiry, known gamertags and XUIDs.

Allowlist Commands

Command	Description
<code>/allowlist add</code>	Manually add a player to the Gravel Host allowlist. Logged to #modlogs.
<code>/allowlist remove</code>	Manually remove a player from the Gravel Host allowlist. Logged to #modlogs.

Player & Inactivity Commands

Command	Description
<code>/player</code>	Look up a specific player — last seen, real Xbox XUID, first seen, inactivity status, ban record, and alert history.
<code>/recent</code>	View all players active in the last 7 days.
<code>/inactivity</code>	Full activity report across 7-day, 30-day, 60-day, and 90-day buckets.
<code>/backfill</code>	Scrape #in-game-chat history to rebuild the player last-seen database.

Server Commands

Command	Description
<code>/kick</code>	Kick a player from the game server via Pterodactyl API. Logged to #modlogs.
<code>/op</code>	Give a player operator status via Pterodactyl API. Logged to #modlogs.
<code>/deop</code>	Remove a player's operator status via Pterodactyl API. Logged to #modlogs.
<code>/allowlist add</code>	Manually add a player to the Gravel Host allowlist. Logged to #modlogs.
<code>/allowlist remove</code>	Manually remove a player from the Gravel Host allowlist. Logged to #modlogs.

General Commands

Command	Description
<code>/help</code>	Lists all available commands with descriptions.
<code>/sync</code>	Links a Discord account to a Minecraft gamertag using a 4-digit code generated in-game with !dsync.

What You Cannot Do

- Issue permanent game bans — Server Admin or above only.
- Take action against another DC Admin, Server Admin, or Head Admin.

Key Notes

- **Spaces in gamertags:** All game commands automatically wrap names in quotes.
- **Temp ban expiry:** Auto-unban queued, allowlist restored, player must re-onboard.
- **Non-Members:** Can be on Discord but cannot join the game server — allowlist entry removed automatically.
- **Real XUIDs:** Captured from Gravel Host server console via Pterodactyl WebSocket on every join.
