Head Admin Guide

Complete system reference for Head Admins — all commands, all automations

Last updated: June 2026

Overview

Head Admins have the highest staff authority below the server owner. You can take action against DC Admins and Server Admins. You cannot take action against another Head Admin — only the server owner can do that.

Full Automation Reference

Discord Events

- **Member joins Discord:** Non-Member role applied immediately. Welcome in #general-lounge with #rules CTA. Structured embed in #modlogs.
- **Member leaves Discord:** Goodbye in #general-lounge. Embed in #modlogs. Auto-deboarded (inactive flagged, allowlist removed).
- **Member banned from Discord:** Auto-deboarded. Flagged banned in database.

Game Events

- **Player joins game:** Real Xbox XUID captured via Pterodactyl WebSocket. XUID saved to database and knownXuids array. XUID checked against banned list. Allowlist add sent to Pterodactyl API. Join embed in #in-game-chat. lastSeen updated. Onboarding ticket closed on first join.
- **Player leaves game:** Leave embed in #in-game-chat (name, session time, online count).
- **Player dies:** Death embed in #in-game-chat (name, cause, coordinates, dimension).
- **Banned XUID detected:** Player kicked from game, Discord ban issued, #admin and #modlogs notified.
- **Inactive Non-Member returns:** Member role restored, allowlist re-added, #in-game-chat and #admin notified.

Onboarding

- **Member joins Discord:** Non-Member role applied immediately.
- **I Agree clicked:** Modal shown requesting Minecraft Bedrock gamertag.
- **Gamertag submitted:** Non-Member swapped to Member, nickname set, allowlist add sent to Pterodactyl, logged to #modlogs and #in-game-names, private welcome ticket opened with server IP (23.111.186.26:50057) and connection instructions.
- **First game join:** Welcome ticket auto-closes, locked, scheduled for deletion in 24 hours.
- **Re-onboarding:** Players who go inactive (Non-Member) can re-onboard at any time to restore Member access and allowlist entry.

AutoMod

- **Cross-channel spam:** All duplicate messages deleted across all channels, member mimed 30 minutes, each deletion logged in #modlogs, summary posted to #admin.
- **Rate-limit spam:** 10+ messages in 10 seconds — same result.
- **Scam keywords:** Message deleted, member mimed 30 minutes, logged to #modlogs.
- **Message edits:** Before and after content logged to #modlogs.
- **Message deletes:** Content and attachments logged to #modlogs.
- **Immune roles:** Head Admin, Server Admin, DC Admin are all immune to AutoMod.

Nightly Report (midnight, #admin)

- **Non-Member sweep:** Runs first — removes any Non-Member from allowlist (catches manual role changes).
- **Recently Played:** All players active in last 7 days.
- **30-59 Days:** Newly inactive — first alert, no action.
- **60-89 Days:** Roles stripped, Non-Member applied, allowlist removed, logged to #modlogs.
- **90+ Days:** Flagged for removal consideration.
- **Skipped — Server Admin / DC Admin:** Inactive but protected, listed separately, no action.
- **Never Logged In:** Discord members who have never joined the game.
- **Exclusions:** Head Admins never appear. Non-Members excluded from action sections.

Ban System

- **On ban:** Game ban queued via Pterodactyl API, allowlist removed, deboarded, player DMed, ban ticket opened with player and staff pinged, #modlogs posted, #admin notified.
- **Temp ban expiry:** Auto-unban queued, allowlist restored, player DMed, ban ticket updated with expiry message, ticket closed after 24 hours. Player must re-onboard.
- **XUID ban evasion:** Banned XUID detected on join triggers auto-kick, Discord ban, #admin and #modlogs notified.
- **Timer recovery:** On bot restart, remaining temp ban timers restored from database automatically.

Allowlist (Pterodactyl API)

- **Add triggers:** Every game join (WebSocket detection), onboarding completion, manual unban, /allowlist add command.
- **Remove triggers:** Deboard (Discord leave/kick/ban), 60-day role strip, nightly Non-Member sweep, manual ban, /allowlist remove command.
- **Manual control:** /allowlist add and /allowlist remove commands for DC Admin and above.
- **Enforcement:** Controlled server-side via allow-list=true in server.properties on Gravel Host.

XUID System

- **Source:** Pterodactyl WebSocket streams Gravel Host console in real time. Bot parses 'Player connected: NAME, xuid: XUID' lines.
- **Storage:** Saved as both xuid (current) and knownXuids (full history array) in playerData.json.
- **Validation:** Negative XUIDs (Bedrock scripting entity IDs) are rejected — only real positive Xbox XUIDs stored.
- **Ban evasion:** knownXuids array checked on every join.

Heartbeat Monitor

- **Heartbeat:** Addon pings bot every 30 seconds. No ping for 120 seconds triggers offline alert in #in-game-chat and #admin tagging Head Admin.
- **Recovery:** Alert flag resets automatically when server comes back online.

HeroSync (!dsync)

- **In-game:** Player types !dsync, receives a 4-digit code. Expires in 5 minutes.
- **In Discord:** Player runs /sync [code], nickname set to gamertag, Non-Member swapped to Member, playerData.json updated, logged to #in-game-names and #modlogs.

HeroTickets

- **Opening:** Member clicks Open a Ticket in #help-tickets, selects category, describes issue. Private channel created.
- **Closing:** Close button generates transcript, posts to #modlogs, locks channel, schedules deletion in 24 hours.

All Commands

Head Admins have access to all commands. Commands work in any channel. Responses are ephemeral.

Ban Commands

Command	Description
<code>/ban</code>	Ban a player. Enter name and reason — a duration dropdown appears (1 Day, 3 Days, 1 Week, Permanent*). Queues game ban via Pterodactyl, removes from allowlist, deboarded, player DMed, ban ticket opened, ModLogs posted, #admin notified. *Permanent requires Server Admin+
<code>/unban</code>	Lift an active ban early. Game unban queued, allowlist restored, player DMed, ban ticket updated and closed in 24hrs. Player must re-onboard.
<code>/banlist</code>	View all currently banned players with duration, expiry, and who issued the ban.
<code>/baninfo</code>	Full ban record for one player — status, reason, who banned, expiry, known gamertags and XUIDs.

Allowlist Commands

Command	Description
<code>/allowlist add</code>	Manually add a player to the Gravel Host allowlist. Logged to #modlogs.
<code>/allowlist remove</code>	Manually remove a player from the Gravel Host allowlist. Logged to #modlogs.

Player & Inactivity Commands

Command	Description
<code>/player</code>	Look up a specific player — last seen, real Xbox XUID, first seen, inactivity status, ban record, and alert history.
<code>/recent</code>	View all players active in the last 7 days.
<code>/inactivity</code>	Full activity report across 7-day, 30-day, 60-day, and 90-day buckets.
<code>/backfill</code>	Scrape #in-game-chat history to rebuild the player last-seen database.

Server Commands

Command	Description
<code>/kick</code>	Kick a player from the game server via Pterodactyl API. Logged to #modlogs.
<code>/op</code>	Give a player operator status via Pterodactyl API. Logged to #modlogs.
<code>/deop</code>	Remove a player's operator status via Pterodactyl API. Logged to #modlogs.
<code>/allowlist add</code>	Manually add a player to the Gravel Host allowlist. Logged to #modlogs.
<code>/allowlist remove</code>	Manually remove a player from the Gravel Host allowlist. Logged to #modlogs.

Setup Commands (run once)

Command	Description
<code>/setup-rules</code>	Posts the I Agree onboarding button to #rules. Run once on initial setup only.
<code>/setup-tickets</code>	Posts the Open a Ticket button to #help-tickets. Run once on initial setup only.

General Commands

Command	Description
<code>/help</code>	Lists all available commands with descriptions.
<code>/sync</code>	Links a Discord account to a Minecraft gamertag using a 4-digit code generated in-game with !dsync.

What You Cannot Do

- Take action against another Head Admin.
- Remove Head Admin role — only the server owner can do this.
