Server Admin Guide

Commands, automations, and responsibilities for Server Admins

Last updated: June 2026

Overview

Server Admins have full ban authority over regular members and DC Admins, including permanent game bans. You cannot take action against another Server Admin or Head Admin. Everything a DC Admin can do, you can do too — plus the additions below.

Additional Automations

All automations from the DC Admin guide apply. Below are additions relevant to your role.

Ban System

- Permanent bans: game ban queued via Pterodactyl API, player deboarded, DMed, ban ticket opened, ModLogs posted, #admin notified.
- Temp ban expiry: auto-unban queued, allowlist restored, player DMed, ban ticket updated and closed after 24 hours. Player must re-onboard.
- XUID ban evasion: banned XUID rejoining under new gamertag triggers auto-kick and Discord ban.
- Bot restart recovery: remaining temp ban timers restored automatically from database.

Allowlist Management

- Allowlist populated on every game join and on onboarding completion via Pterodactyl API.
- Allowlist removal triggers: deboard (Discord leave/kick/ban), 60-day role strip, nightly Non-Member sweep, manual ban.
- Manual add/remove available via /allowlist command.
- Enable enforcement on Gravel Host by setting allow-list=true in server.properties.

Nightly Role Strip

- Players inactive 60+ days have roles stripped and Non-Member applied. Allowlist entry removed immediately.
- Nightly Non-Member sweep removes any player manually set to Non-Member since last run.
- Server Admins appear in a separate Skipped section — no action taken on them.

Your Commands

Everything available to DC Admins plus permanent ban authority and ability to action DC Admins.

Ban Commands

Command	Description
<code>/ban</code>	Ban a player. Enter name and reason — a duration dropdown appears (1 Day, 3 Days, 1 Week, Permanent*). Queues game ban via Pterodactyl, removes from allowlist, deboarded, player DMed, ban ticket opened, ModLogs posted, #admin notified. *Permanent requires Server Admin+
<code>/unban</code>	Lift an active ban early. Game unban queued, allowlist restored, player DMed, ban ticket updated and closed in 24hrs. Player must re-onboard.
<code>/banlist</code>	View all currently banned players with duration, expiry, and who issued the ban.
<code>/baninfo</code>	Full ban record for one player — status, reason, who banned, expiry, known gamertags and XUIDs.

Allowlist Commands

Command	Description
<code>/allowlist add</code>	Manually add a player to the Gravel Host allowlist. Logged to #modlogs.
<code>/allowlist remove</code>	Manually remove a player from the Gravel Host allowlist. Logged to #modlogs.

Player & Inactivity Commands

Command	Description
<code>/player</code>	Look up a specific player — last seen, real Xbox XUID, first seen, inactivity status, ban record, and alert history.
<code>/recent</code>	View all players active in the last 7 days.
<code>/inactivity</code>	Full activity report across 7-day, 30-day, 60-day, and 90-day buckets.
<code>/backfill</code>	Scrape #in-game-chat history to rebuild the player last-seen database.

Server Commands

Command	Description
<code>/kick</code>	Kick a player from the game server via Pterodactyl API. Logged to #modlogs.
<code>/op</code>	Give a player operator status via Pterodactyl API. Logged to #modlogs.
<code>/deop</code>	Remove a player's operator status via Pterodactyl API. Logged to #modlogs.
<code>/allowlist add</code>	Manually add a player to the Gravel Host allowlist. Logged to #modlogs.
<code>/allowlist remove</code>	Manually remove a player from the Gravel Host allowlist. Logged to #modlogs.

General Commands

Command	Description
<code>/help</code>	Lists all available commands with descriptions.
<code>/sync</code>	Links a Discord account to a Minecraft gamertag using a 4-digit code generated in-game with !dsync.

What You Cannot Do

- Take action against another Server Admin or Head Admin.
- Remove or modify Head Admin protections.

Key Notes

- **Upgrading a DC Admin temp ban:** Use /unban first then /ban with Permanent selected.
- **Allowlist enforcement:** When ready, set allow-list=true in Gravel Host server.properties.
- **Re-onboarding after ban:** Unbanned players must click I Agree in #rules again to regain Member access and allowlist entry.
